1. INTRODUCTION

Campus Fix – Smart College Problem Reporting & Resolution System is a Python desktop application, developed using Tkinter, to make the process of reporting and resolving campus problems simple, fast, and transparent. It allows students to create an account, sign in, and report issues such as facilities, hostel, cafeteria, IT / Wi-Fi, and safety problems, and to track the status of each complaint. The administrator can search all complaints, update their status from Submitted to In Progress and Resolved, view an analytics chart, and export the records to a CSV file. All accounts and complaints are stored in local JSON files. The system reduces paperwork and manual follow-up compared to traditional complaint boxes and verbal reporting.

3. Objectives

1. To simplify the reporting of campus problems using a computerised desktop application.
2. To provide secure sign-in with role-based access for students and administrators, with passwords of registered accounts stored as SHA-256 hashes.
3. To allow students to submit complaints by category and track their status.
4. To allow the administrator to search, review, and update the status of complaints.
5. To provide an analytics chart and CSV export to support better decision-making.
6. To maintain complaint and account records in local JSON storage and reduce paperwork.

5. Conclusion

Campus Fix – Smart College Problem Reporting & Resolution System demonstrates how Python can be used to develop a computerised complaint management application. It provides a simple interface for user sign-in, complaint submission, status tracking, and complaint administration, along with analytics and CSV export. The system brings transparency to the resolution process, helps reduce manual work, and improves the organisation of complaint records, contributing towards a better-maintained campus.
